<b>Light Residential</b>	Residential flooring areas subject to soft-soled footwear or normal footwear traffic without heavy dirt. Some examples would be: interior rooms such as bathrooms and bedrooms without exterior access.
<b>Residential</b>	Residential flooring areas that are subject to soft-soled footwear or normal footwear traffic with small amounts of abrasive soil. Some examples would be: living or dining rooms.
<b>Heavy Residential</b>	Residential flooring areas that are subject to normal footwear traffic with occasional amounts of abrasive soil. Some examples would be: halls, kitchens and corridors.
<b>Light Commercial</b>	Non-industrial, commercial flooring areas that are subject to normal footwear traffic (less than 50 people per hour) with occasional amounts of abrasive soil. Some examples would be: boutique showrooms and corporate office spaces.

<sup>1</sup> The following Devotion colors are NOT recommended for exterior applications: Lustre and Gilt.

<sup>2</sup> In general, Facings of America only recommends opaque tile in steam showers. However, in some instances, translucent tile may be used when installed with specific installation materials.

**FIREPLACES:** We recommend ALL Glass & Tile products for use on fireplace surrounds (wall tile) and/or hearth (floor tile only) applications. Glass & Tile products are NOT recommended for use inside fireboxes.

**SALT WATER POOLS:** All Glass & Tile products recommended for use in pools (see chart above) are not adversely affected by exposure to salt water and are recommended for use in both fresh water and salt water pools.

**SIZE LIMITATIONS:** Tiles with any edge longer than 5" or trim tile with any edge longer than 2.5" are not recommended for use on shower floors or in pool or water feature applications.

# TEST RESULTS

## Dynamic Coefficient of Friction Statement

Tiles with Dynamic Coefficient of Friction (DCOF) values less than .42 are not recommended for use on level, interior spaces expected to be walked upon when wet. If such tiles are used as a walking surface where water, ice, oil, grease and/or other substances are present, such a condition could cause a reduction in foot traction and become unexpectedly slippery, resulting in a fall and personal injury. However, this criteria does not apply to shower floors. The suitability of a tile for use on shower floors will be impacted by the format size of the tile, the size and frequency of the grout joints, a lack of footwear during showering and the expectation that the walking surface is wet. Due to the increase in drainage and reduction in the potential to hydroplane provided by a higher number of grout joints and an increase in traction of a bare foot, tiles that are 2" x 2" or smaller, that test below .42 DCOF, may be suitable for use on shower floors. See ANSI A326.3 American National Standard Test Method For Measuring Dynamic Coefficient of Friction of Hard Surface Flooring Materials, available at [www.tcnatile.com](http://www.tcnatile.com), for additional information.
